

# CASE STUDY

# CONTIGUOUS PILE WALL

**Location:  
Manchester, UK**

The gym and swimming pool areas of Property Alliance Group's Oxygen development, required works to start before the tower cranes had been removed and ahead of the building being made watertight. These were ideal conditions for a mould-resistant, quick-to-install product like Specwall which can be installed in all weather conditions.

A space of 52mx5.8m with deflection head was installed along with six wind posts and 150mm of insulation across the whole span of wall in less than half the time that traditional block would have taken.

Specwall also only require a scissor lift as opposed to a full scaffold, and there were no changes in trades or revisits to the workface required.
