

# CASE STUDY

# VIADUX

**Location:  
Manchester, UK**

Viadux is a brand new residential development in Manchester which combines the city's industrial past with a modern sense of luxury. It is a £300m, 40-storey tower designed by Simpson Haugh Architects which features high quality one, two-bedroom apartments with extraordinary views across the city centre skyline.

New designated pathways combined with carefully managed public spaces will bridge the gap between Viadux and other major districts of the city centre.

Specwall was used in a number of areas throughout the development where our products unique characteristics would have the greatest impact, including the mezzanine level, the plant room and other communal facility areas.

"Specwall is a really fast system that provides an alternative to blockwork, SFS and even internal partitions. It provides areas of Viadux including the karaoke bar, cinema room, plant room and other areas with 3+ hour fire rated walls, and we completed the Phase 1 install of the Mezzanine level in just 17 days."

Rick Vose, Site Manager at Complete Wall Solutions
